

ADVISORY SERVICES

RISK MITIGATION

As companies look to gain an unbiased, complete view of the true risks to their organization, many have turned to trusted security partners to deliver comprehensive security risk assessment and mitigation services. Many business leaders have general ideas about risk, especially IT risk, but failure to identify and understand risk within the overall enterprise leaves the IT manager with a very incomplete picture of risks to the organizational infrastructure.

GDT provides a comprehensive risk assessment engagement that identifies, categorizes, and quantifies the risks identified, as well as providing a risk remediation strategy and residual risk comparisons with selected remediation approaches. Risk Mitigation Advisory Services by GDT are offered through a comprehensive suite of security assessment and advisory programs.

PROVIDING OPTIMAL RISK MITIGATION SOLUTIONS

SECURITY PROGRAM ASSESSMENTS

Security Program Assessments by GDT serve as the initial phase of our strategic security planning and risk mitigation services. It begins with an in-depth assessment of your environment from staff to projects, and technology to services. These assessments align the business objectives and priorities to long term vision of the technology organization. Input from targeted business areas is fused into the strategy, creating a unique success path for your organization.
